

TABLE 1. A SUMMARY (including footnotes) OF ATLANTIC MARINE MAMMAL STOCK ASSESSMENT REPORTS FOR STOCKS OF MARINE MAMMALS UNDER NMFS AUTHORITY THAT OCCUPY WATERS UNDER USA JURISDICTION.

Total Annual S.I. (serious injury) and Mortality and Annual Fisheries S.I. and Mortality are mean annual figures for the period 2005-20092006-2010. The “SAR revised” column indicates 2011-2012 stock assessment reports that have been revised relative to the 2009-2011 reports (Y=yes, N=no). If abundance, mortality, PBR or status have been revised, they are indicated with the letters “a”, “m”, “p” and “status” respectively. For those species not updated in this edition, the year of last revision is indicated. Unk = unknown and undet=undetermined (PBR for species with outdated abundance estimates is considered “undetermined”).

Species	Stock Area	NMFS Ctr.	Nbest	Nbest CV	Nmin	Rmax	Fr	PBR	Total Annual S.I and Mort.	Annual Fish. S.I and Mort. (cv)	Strategic Status	SAR Revised

- a. The R given for right whales is the default Rmax of 0.04. The total estimated human-caused mortality and serious injury to right whales is estimated at 2,483.0 per year (USA waters, 1,240; Canadian waters, 0.46). This is derived from two components: 1) non-observed fishery entanglement records at 0.81.68 per year (USA waters, 0.81.46; Canadian waters, 0.2), and 2) ship strike records at 1.62 per year (USA waters, 1,20.8; Canadian waters, 0.4).
- b. The total estimated human-caused mortality and serious injury to the Gulf of Maine humpback whale stock is estimated as 5,27.8 per year (USA waters, 4,87.6; Canadian waters, 0.42). This average is derived from two components: 1) incidental fishery interaction records 35.8 (USA waters, 3,45.6; Canadian waters, 0.42); 2) records of vessel collisions, 1,42.0 (USA waters, 1,42.0; Canadian waters, 0.4).
- c. This is based on a review of NMFS records from 2005-20092006-2010, that yielded an average of 2.60 human caused mortality; 1.82 ship strikes (1.42 in USA waters and 0.4 in Canadian waters) and 0.8 fishery interactions/entanglements (0.6 in USA and U.S. A and 0.2 in Canadian waters).
- d. During 2005-20092006-2010, the USA total annual estimated average human-caused mortality is 5.90 minke whales per year. This is derived from four components: 1.0.8 minke whales per year from USA fisheries using strandings and entanglement data, 1.20 minke whales per year from Canadian fisheries using strandings and entanglement data, 3,52.6 minke whales per year from observed fishery data (CV=0.3437), and 0.4 minke whales per year from ship strikes.
- e. This estimate may include both the dwarf and pygmy sperm whales.
- f. This estimate includes Cuvier's beaked whales and undifferentiated *Mesoplodon* spp. beaked whales.

- g. While abundance estimates have been attributed to each stock, the bycatch estimate includes both long-finned and short-finned pilot whaleswhales.
- h. Estimates may include sightings of the coastal form.
- i. Several seasonal management units have been defined for the coastal bottlenose dolphin. Each has a unique abundance estimate, PBR and mortality estimate provided in the Western North Atlantic coastal bottlenose dolphin species section of the text.
- j. The total annual estimated average human-caused mortality is 927-840 (CV=0.14) harbor porpoisesporpoises per year; 883-796 harbor porpoise per year (CV=0.4415) from U.S. fisheries using observer and MMAP data and 44 per year (unknown CV) from Canadian fisheries using observer data.
- k. The total estimated human caused annual mortality and serious injury to harp sealsseals is 441,950-379,673. Estimated annual human caused mortality in US waters) 231-282 harp seals CV=0.4819) from the observed US fisheries. The remaining mortality is derived from five components: 1) 2005-2006-2009-2010 average catches of Northwest Atlantic harp seals by Canada, 239,594-188,646; 2) 2005-2006-2009-2010 average Greenland Catch, 86,474-82,063; 3) 1,000 average catches in the Canadian Arctic; 4) 12,290-330 average bycatches in the Newfoundland lumpfish fishery; and 5) 102,803-95,347 average struck and lost animals.
- l. This is derived from three components: 1) 5,173 from 2001-2005 (2001 = 3,960; 2002 = 7,341; 2003 = 5,446, 2004=5,270; and 2005=3,846) average catches of Northwest Atlantic population of hooded seals by Canada and Greenland; 2) 25 hooded seals (CV=0.82) from the observed U.S. fisheries; and 3) one hooded seal from average 2001-2005 stranding mortalities resulting from non-fishery human interactions.
- m. This estimate includes Gervais' beaked whales and Blainville's beaked whales.
- n. This estimate includes all *Globicephala* sp., though it is presumed that only short-finned pilot whaleswhales are present in the Gulf of Mexico.
